# Hardwired Call Points

The AX-500 series are a line of call points that are flush wall-mounted and are available with an optional pendant socket. A call is activated by pressing the call button on the call point or on an optional plug-in call pendant.

A reassurance LED on the call point shows when a call is active, giving your patients peace-of-mind that their call has been placed.

The call points are available in a range of standard colours and labels to coincide with various alarm priority levels.

The pendant socket incorporates a selectable “pendant removed” alarm. This activates a call when the pendant is unplugged, allowing staff to ensure that your patient always has a nurse call button available.

## Order Code

Product Code	Description
AX-500-NC	Call Point with Green Nurse Call Button
