

Digital TV Signal Meter

Model: NM-25
Part No: BC85220

The Hills Antenna NM-25 Digital Signal Meter helps you align your TV Antenna for the best digital reception with a minimum of fuss. The NM-25 connects directly to your TV Antenna and the LED's indicate the signal strength.

Install a 9V battery into the holder at the rear of your NM-25. (Battery not included).

You can also power the unit with a 5-12V DC adaptor fitted with a 3.5mm jack plug (not supplied).

Use the F lead supplied if your TV Antenna has F connectors to connect from the TV Antenna balun into the socket marked Antenna on the NM-25.

The PAL to F adaptor supplied can be used to test for a signal at any TV Antenna wall socket when connected to the Antenna.

NOTE: Connection to the Receiver F socket is optional and can be made if you want to watch the TV picture during testing, it is not necessary to make this connection to test the signal strength.
